1. INTRODUCTION

In order to implement reliable and consistent DevOps within a company using Azure, Azure pipelines and Azure DevOps, it is worth to follow set of predefined best practices as follows

- **Security first.**
- **Store pipeline secrets securely.**
- **Cache build assets.**
- **Don't repeat yourself.**
- **Parallel everything, if possible.**
- **Optional CI/CD jobs run.**
- **Automate everything, if possible.**

Date: January 29, 2023.

Key words and phrases. Software engineering, DevOps, Software release, GitHub flow, GitLab flow, Azure DevOps, Azure pipelines, Semantic versioning, GitVersion, CI/CD .

2. CONCLUSIONS

Conclusions of your manuscript.
